application

Terminology

Formula **free of chemical solvents** making safe to handle and non-toxic.

Formula has **no dangerous substances** that could create any harmful reaction if ingested or inhaled.

Polyvinylpyrrolidone is a no toxic highly soluble substance that provides better and long-lasting adhesion.

Washes out with **20°C** water and below.

Washes out with **35°C** water and above.

Main ingredient in the formula may cause allergic reactions and eyes, skin and respiratory irritation.

Formula

Why PVP Glue sticks?

PVP provides more stable adhesion, is a safe substance to kids use as it doesn't cause any toxic reactions if inhaled or absorbed.

What is the difference between Solvent vs Solvent free?

For solvent base adhesives, resins are dissolved in solvent to produce a tacky polymer solution, which can be extremely adhesive when polymer dries, and solvent evaporates. As for solvent free adhesives, natural compounds like cellulose or polyvinyl acetate (PVA) are dissolved in water or organic based solvents to provide the same adhesion qualities.

What types of glues does Pelikan offer?

Glue sticks

Made of a solvent free, PVP based formula, our glue sticks provide smooth dry application.

Craft glue

With a PVA based formula this is the most commonly used glue for kids. Used in handicraft activities, this non-toxic glue is the best choice to small kids to use for multiple activities.

Paper glue

With a PVP based formula our solvent free paper glue provides a quick dry application to paper and cardboard surfaces with no residues and no wrinkling.

All-purpose glue

With a PVP based formula our solvent free universal glue provides effective adhesion to a wide range of surfaces with effective performance.

Super glue

The strongest adhesive with a MCA based formula, used to instantly glue the most tough surfaces like metal, ceramic and porcelain.
